

**CARDIAC RHYTHM MANAGEMENT SYSTEM SELECTING
BETWEEN MULTIPLE SAME-CHAMBER ELECTRODES FOR
DELIVERING CARDIAC THERAPY**

Abstract

5 A cardiac rhythm management system selects one of multiple electrodes
associated with a particular heart chamber based on a relative timing between
detection of a depolarization fiducial point at the multiple electrodes, or based on a
delay between detection of a depolarization fiducial point at the multiple electrodes
and detection of a reference depolarization fiducial point at another electrode
10 associated with the same or a different heart chamber. Subsequent contraction-
evoking stimulation therapy is delivered from the selected electrode.
